Combination of advanced digital technology of the display electronics and the transmitter, makes this the system of choice for a wide range of applications where precise indication, control and monitoring is critical.

Model DS1200-AMT system can be factory configured to read in °F dewpoint, °C dewpoint, ppm(v), ppb(v), g/m³ or lbs/MMSCF. The measured value is displayed on a large 4 digit, 0.150" (13.8mm) high, fourteen segment LED display. **Model DS1200-AMT Dewpoint Hygrometer** is fully configured to the customer's specifications.

The instrument offers two fully programmable alarm relays, which can be independently set across the full operating range. An optically isolated analogue signal, linear with the measured unit is also available (to interface with any external device).

Model DS1200-AMT can be supplied with any one of a range of dewpoint transmitters, which have all been specially manufactured to provide long term stability, so ensuring a long and trouble free service life.

The long lasting sensing element offers excellent sensitivity, repeatability and response speed - especially on dry down. Integrated electronics in each transmitter allow calibration data to be stored within its memory, making transmitters completely field interchangeable.

Each transmitter is calibrated to provide overall system accuracy of better than ±3.6°F (±2°C) dewpoint and supplied with a certificate of calibration traceable to international humidity standards NIST & NPL.

Model DS1200-AMT also incorporates the invaluable "**AUTOCAL**" feature for easy field verification of the system response, without recourse to any additional equipment. Accidental or unauthorised operation is prevented by a simple initiation routine.

The system allows the display unit to be sited in excess of 3300 feet (1000m) from the transmitter, connected by a simple twisted pair cable.
